## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-2 are rejected under 35 U.S.C. 102(e) as being anticipated by Sekino et al. (6,794,089).

Sekino et al. teaches in column 3, lines 43-53, that the nonaqueous electrolyte secondary battery comprises a case having a wall thickness not larger than 0.3 mm, an electrode group provided in the case and a nonaqueous electrolyte provided in the case. Sekino et al. teaches in column 7, lines 16-35, that the nonaqueous solvent includes ethylene carbonate, propylene carbonate, gamma-butyrolactone, vinylene carbonate and a vinylethylene carbonate, phenylethylene carbonate, etc. The mixing ratio is 15-50% by volume ethylene carbonate, 2-35% by volume propylene carbonate, 30-85% by volume gamma-butyrolactone, is between 0-5% by volume vinylene carbonate and between 0-5% by volume vinylethylene carbonate.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ueda et al. (US 2002/0192565).

Ueda et al. teaches on page 5, a battery comprising a positive electrode, a negative electrode, a separator and a nonaqueous electrolyte. The positive electrode comprises LiCoO<sub>2</sub> and the negative electrode comprises graphite. Ueda et al. teaches on page 6, Table 1, that the electrolyte comprises LiPF<sub>6</sub> or LiBF<sub>4</sub>. Ueda et al. teaches on page 10, Example 6, a nonaqueous electrolyte containing gamma-butyrolactone (GBL), vinylene carbonate (VC) and vinylethylene carbonate (VEC), ethylene carbonate (EC) and diethyl carbonate (DEC) at a volume ratio of 67: (2 +1): 20:10.

Ueda et al. does not specifically teach the thickness of the battery casing but it would be within the skill of the ordinary person to adjust the thickness of the battery casing depending on the size, efficiency and cost requirements.

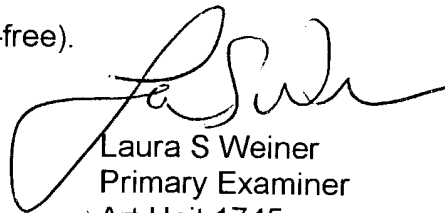

Art Unit: 1745

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a battery casing comprising a thickness of 0.5 mm or less, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).
